Official Knowledge Base & Support Manual v4.2 (RAG-Ready Edition)

This document serves as the single source of truth for all corporate policies, customer support SLAs, return matrices, and product troubleshooting guidelines. It is compiled specifically to test vector search chunking, semantic parsing, and context retrieval in Retrieval-Augmented Generation (RAG) frameworks.

1. Return, Refund, and Exchange Policies

1.1 Standard 14-Day Return Window

Customers are eligible to initiate a return or exchange request within exactly fourteen (14) consecutive calendar days starting from the timestamp of delivery confirmation as recorded by our third-party logistics partners. Any request initiated at 14 days and 1 hour will be systematically rejected by the customer success portal.

Condition Criteria: Products must be returned in their original, unmodified manufacturing condition. This implies the outer box seal must be completely intact, all protective polyethylene films must be unpeeled, and all bundled accessories (including registration cards, compliance leaflets, and promotional stickers) must be present inside the container box.

1.2 Restocking Fees and Exceptions

A standard restocking fee applies to specific item categories to cover diagnostic and repackaging overhead costs. Please refer to the matrix below for administrative deductions:

Product Category	Condition of Item	Restocking Fee Deduction	Refund Eligibility Method
Consumer Electronics (Cameras, Laptops)	Unopened Seal	0% (Full Refund)	Original Payment Mode
Consumer Electronics (Laptops, Mobile Devices)	Opened Seal, Unused System	15% Deduction	Store Credit Only
Home Appliances & Smart Hubs	Opened, Minimal Operational Hours	20% Deduction	Store Credit Only
Batteries, Power Banks & Chargers	Any Condition (Opened/Used)	Non-Returnable	Ineligible for Refund

1.3 Refund Processing Timelines

Once a return parcel arrives at our centralized fulfillment warehouse (located at Gate 4, Sector G-11, Logistics Hub), it undergoes a mandatory 48-hour engineering inspection. If approved, the refund is triggered via our payment gateway API. Credit Card and Debit Card transactions take 7 to 10 working days to reflect on the customer's bank statement. Digital Wallet payments (e.g., EasyPaisa, JazzCash) are processed instantly within 24 hours of engineering approval.

2. Shipping, Logistics, and Delivery Service Level Agreements (SLAs)

2.1 Logistics Partners & Delivery Tiers

GlobalCart coordinates shipping through three primary regional express carriers: BlueEx Logistics, TCS Express, and Leopard Couriers. Shipping tiers are locked at checkout based on geographic priority zones:

- **Tier 1: Standard Shipping:** Dispatched via surface transit. Delivery timeline spans 3 to 5 business days across all metropolitan areas. Cost is flat-rate or free for orders exceeding PKR 5,000.
- **Tier 2: Express Premium Shipping:** Dispatched via air transit. Delivery is guaranteed within 24 to 48 business hours. Restricted exclusively to Zone-A urban clusters.

2.2 Handling Shipping Delays and Damaged Deliveries

In the event that a shipment experiences a major logistical bottleneck (e.g., roadblock, severe weather advisory) extending transit past 7 business days, the automated tracking engine flags the order as [LOG_DELAY_EXT]. Customer service agents are authorized to issue a PKR 500 compensatory voucher code if the customer initiates a complaint regarding this tracking flag.

If a product arrives with external physical damage (cracked screen, broken chassis, ruptured packaging), the customer must submit digital photographic evidence within 24 hours of delivery. Failure to provide timestamped proof within 24 hours invalidates the shipping insurance claim, and the ticket cannot be escalated for a free replacement.

3. Product Technical Support and Troubleshooting Matrix

3.1 Electronic Chargers and Power Adapters

All GlobalCart Fast Chargers use intelligent Gallium Nitride (GaN) semiconductor architecture. It is completely normal for the adapter to reach a surface operational temperature of up to 45°C during the initial 30 minutes of high-amperage power delivery cycles.

Critical Safety Note for Agents: If a customer reports that a charger is emitting a ticking sound, producing an ozone smell, or sparking upon insertion into an AC wall socket, the agent must immediately instruct the user to unplug the device. This must be categorized as a **Critical Tier-1 Safety Risk** and escalated to the QA Engineering Unit within 15 minutes.

3.2 Smart Lithium Battery Calibration

If a customer claims their smartphone or camera battery drains completely within 2 to 3 hours of operation, support agents should verify if the battery has been calibrated. Instruct the customer to perform the following technical calibration protocol:

1. Drain the product's lithium battery completely until the hardware shuts down automatically due to zero voltage state.
2. Plug the device into an authentic GaN charger and allow it to charge uninterrupted for exactly 6 hours, ensuring the device remains powered off during the entire cycle.
3. Power on the device and verify if the firmware correctly reports 100% capacity. Repeat this cycle twice to stabilize voltage drop patterns.

4. Frequently Asked Questions (Support Agent Script)

Q: Customer wants a refund because the packaging box was slightly dented, but the product inside works perfectly. Is this eligible for a refund?

A: No. Section 1.2 explicitly states that refunds are based on product condition. Cosmetic damage to the outer shipping cardboard box does not qualify for a return or refund if the core item functions properly.

Q: An item was purchased during a promotional Flash Sale. Can the customer exchange it for a different color?

A: Flash Sale promotional items are strictly bound by the "All Sales Are Final" clause. They are completely ineligible for color exchanges or standard order modifications unless the item received has a verified manufacturing defect right out of the box.
